

Update No. 1 to Draft

Salinas Valley: 180/400-Foot Aquifer Subbasin Groundwater Sustainability Plan

The following updates have been made consistent with Board Direction upon the release of the draft plan.

Reverting all figures to extend the boundary of the GSP and the Subbasin to include the MGSA area.

Ensuring that all figures have MCWD's corrected service area (our original figures with the Subbasin boundary including MGSA area did not).

Where we note MGSA's service area in a figure, it now reads "non-exclusive".

Updating the text and Executive Summary to reflect that there is overlap between this GSP and MGSA's service area, but that SVBGSA is working to resolve the overlap prior to GSP submission.

Correcting references that were identified after sending the October 1st draft, including both in-text citations and the reference list.
